Modular Displays - System Built

A series of interlinking panels or extrusion that act as building blocks to create reconfigurable, but seemingly custom displays.

These types of display are weight bearing, allowing the integration of AV equipment and other interactive functionality. They can be reconfigured to suit varying exhibit spaces. Ideal for use as a shopping centre display, for trade shows, conferences or exhibitions.

System built displays are a relatively new concept in exhibiting - the idea is based on traditional pole and panel systems but with many enhancements. In a world ever decreasing in size and companies looking to globalise their operations, it is far more common to find you self exhibiting interstate or overseas. To ship your custom built stand across the country or the world can be an expensive exercise, not to mention the ongoing storage and installation costs!

Panels are constructed with an extruded aluminium frame and lightweight infill for maximum strength and stability. They are connected with either internal or external connections and truss systems. Panels can be a combination of laminate and high impact graphic. Accessories include, locking display cases and storage cabinets, slatwall, pull out keyboard shelves, light boxes, scone lighting and much more...

Do you have a display problem?...
